

LIFESOURCE COMMERCIAL | PRODUCT OVERVIEW

Clean Water without Maintenance.

As a developer, architect, engineer or builder, you probably aim to add value to your projects. Providing clean, great tasting water is one way to enhance and protect your investment. Whole-house, carbon-based water filtration systems filter and condition water from the water main. Tap water is transformed to bottle water quality flowing from every faucet. LifeSource Water has been manufacturing and selling water systems since 1984. In addition to filtering your water, our systems can reduce and prevent scale buildup in your boilers, fixtures and plumbing infrastructure without using salt.

Avoid Water Softener Bans.

Many regions throughout the U.S. have hard water issues. Salt-based water softeners are the traditional choice used to treat these conditions to prevent scale problems. Many counties are now banning their use because of the large amount of water they waste, and the polluting effects discharged salt brine causes to the environment. The excess salt water can be harmful to aquatic life and agriculture and has negative impacts on water treatment plants. There are also the hidden costs of salt, labor and monthly service fees that make these old-fashioned systems inefficient.

LifeSource ScaleSolvers®

Hard water scale buildup can greatly reduce energy efficiencies and the shorten the lifespan of your plumbing, water heaters and fixtures. LifeSource uses an ecofriendly technology – Template Assisted Crystallization® (TAC) – which has been thoroughly tested by independent labs and endorsed by the WaterReuse Foundation. The result is a better alternative to salt-based water softeners while still conditioning water and reducing scale buildup.

LifeSource Water Filtration.

For the best value, install LifeSource Water Systems. Our coconut-shell, granular-activated carbon systems connect to your project's main water line and are virtually maintenance-free with no filter changes for years to come. They filter out chlorine, chloramines and dirt, leaving in essential minerals such as calcium and magnesium. The result is clean, refreshing drinking water from every tap in the home or building.

Eliminate Need for Bottled Water.

Once installed, your residents, guests and staff can eliminate the need to buy plastic bottled water. The added value of ecofriendly living and reducing plastic waste is a win for everyone.
