

Clean Water. Green Living.™

As a developer, architect, engineer or builder, you look for ways to add differentiating value to your projects in ways that benefit your homeowners, residents and guests. Providing clean, great-tasting water – filtered and conditioned throughout a building or home – is one way to increase the value of your work. Whole-house, carbon-based water filtration systems are what LifeSource has been manufacturing and selling for 30 years with over 50,000 happy customers. And removing and preventing scale buildup in your boilers, fixtures and plumbing infrastructure without using salt is our latest solution for commercial projects.

Softeners are Being Banned.

Many regions throughout the U.S. have hard water issues. Salt-based water softeners are the conventional choice used to treat these conditions to prevent scale problems. Now, however, many counties are banning their use because of the large amount of water they waste and the polluting effects discharged salt brine on the environment. This is potentially harmful to aquatic life and agriculture and has negative impacts on water treatment plants. Also, there are the hidden costs of salt, labor and monthly service fees that make these old-fashioned systems a pain to maintain.

LifeSource ScaleSolvers®

Hard water scale buildup can greatly reduce energy efficiencies and the estimated lifespan of your plumbing, water heaters and fixtures. LifeSource uses proven green technology – Template Assisted Crystallization® (TAC) – which has been thoroughly tested by independent labs and endorsed by the WaterReuse Foundation to be a better alternative than salt-based water softeners to condition water and reduce and prevent scale.

LifeSource Water Filtration.

For the best value, install LifeSource. Our coconut-shell, granular-activated carbon systems connect to your project's main water line and are virtually maintenance-free with no filter changes for years to come. They filter out chlorine, dirt and bad sediments – leaving in essential minerals such as calcium and magnesium – delivering clean, refreshing drinking water from every tap in the home or building.

Eliminate Need for Bottled Water.

Once installed, your residents and staff never need to buy and store bottled water again. Just fill up reusable bottles – saving money and eliminating excess plastic bottle waste which pollutes the environment.
